Administrative Boundaries

ADMINISTRATIVE BOUNDARIES

Administrative Levels

19-Q2

AND continually builds up administrative layers of accurate information to support any user case or feature. Our Administrative Boundaries cover administrative layers on deepest possible level, layered consistently and precisely.

AND Administrative Layers are defined by up to nine hierarchical levels, going from the highest level of country boundaries to the lowest, that being the smallest administrative subdivision, individual for each country. The shapes are country-covering and leave no gaps.

KEY FEATURES

The data furthermore includes Named Areas and informal levels as alternative designations.

TYPICAL USE CASES

The correct, precise data is the base for our navigation maps and has already found application in countless user cases that include logistics, navigation, marketing, geofencing, geolocated services, geotargeting, and many more.

DELIVERY FORMATS

Shape (.shp/.shx/.dbf/.prj)

PROJECTION

The global projection system used in AND data is in decimal degrees (latitude and longitude) with WGS84 as datum, according to the ellipsoid model used for computations. The spatial reference id is EPSG:4326.

CHARACTER SET

The character-set used is the ANSI page code 1252 (latin1).
